

Arizona Yoga Co. - Website UX Redesign

UX Research & Website Redesign

Second Semester Project

MY ROLE

UX Designer & Researcher

Led the complete UX research and redesign process, from heuristic evaluation and user surveys to prototyping and usability testing.

TOOLS & METHODS

Heuristic Evaluation, User Surveys, Personas, Usability Testing, Figma Prototyping

PLATFORM & TIMELINE

Platform: Desktop Website

Timeline: Second Semester Project

OVERVIEW

Arizona Yoga Co. is a community-focused yoga studio offering in-studio, online, and workshop-based classes through a donation-based pricing model. While the studio has a strong mission centered on accessibility and inclusivity, its website experience did not effectively support users in discovering classes, understanding pricing, or completing key tasks such as booking or contacting the studio. This project focused on identifying usability barriers and translating research-driven insights into practical, user-centered design solutions.

CONTEXT

The Challenge

Despite offering valuable yoga programs and a unique donation-based pricing model, the Arizona Yoga Co. website created significant friction for users attempting to complete core tasks.

Research revealed that users struggled with understanding how to book classes, navigating between different class formats, interpreting the donation-based pricing model, and finding essential information. These issues affected usability, user

Class Discovery Confusion

Users struggled to understand how to book or register for classes across different formats.

Navigation Complexity

Inconsistent navigation patterns between Studio, Zoom, YouTube, and Workshop formats.

trust, and conversion—particularly for first-time visitors and beginners.

Pricing Ambiguity

Users couldn't interpret the donation-based pricing model with confidence.

Information Hierarchy

Difficulty finding essential information like schedules, instructor details, and contact options.

No Online Booking Flow

Absence of online booking flow increased cognitive load and caused frustration.

THE CHALLENGE

How might we redesign the experience to reduce friction in class discovery and booking, clearly communicate pricing, and support both beginner and experienced practitioners?

Project Timeline – 12-Week UX Process

This project followed a structured 12-week UX research and design process, moving from understanding the problem to delivering research-driven solutions.

WEEK 1-2 **Project Understanding & Initial Audit**

I began by familiarizing myself with Arizona Yoga Co.'s mission, offerings, and existing website experience. During this phase, I reviewed the site's structure, content, and primary user flows to understand how users currently discover classes, pricing, and contact information.

I identified early signs of usability friction, including unclear navigation labels, inconsistent layouts across class pages, and the absence of a clear booking pathway. This initial audit helped me form hypotheses that guided deeper research in later stages.

Donation-based yoga. Always.

WEEK 3-4 **Heuristic Evaluation (Usability Assessment)**

I conducted a comprehensive heuristic evaluation using Nielsen's 10 Usability Heuristics to systematically identify usability issues across the website.

Key issues identified included:

- Lack of user control and freedom (no clear way to undo actions or navigate back)
- Poor visibility of system status (no feedback on clicks or form interactions)
- Inconsistent standards across similar pages

- Missing or hidden help and documentation

Each issue was severity-rated to prioritize design focus. Several problems were classified as major or catastrophic, particularly around navigation, booking expectations, and clarity of actions. These findings established a strong usability baseline for the redesign.

WEEK 5 User Survey & Quantitative Research

To better understand user expectations, behaviors, and decision-making patterns, I designed and conducted a user survey with 14 participants.

The survey revealed that:

- Many users were beginners or infrequent visitors who needed fast, obvious answers
- Class schedules, booking, pricing, and location information were considered critical
- Most users expected familiar patterns such as online booking and membership options
- Donation-based pricing was unfamiliar and caused uncertainty

These insights helped ground the redesign in real user needs rather than assumptions.

13	9/20/2025 21:06:11	25-34	Female	Urban	I'm new to yoga	Rarely or never

WEEK 6

Research Synthesis & Key Insights

I synthesized findings from the heuristic evaluation and user survey into clear, actionable insights. This step allowed me to move from individual observations to broader UX problems.

Three core themes emerged:

1

Booking friction

Users could not complete their primary goal efficiently

2

Cognitive overload

Inconsistent layouts and hidden information increased effort

3

Decision anxiety

Unclear pricing and expectations reduced user confidence

WEEK 7

Persona Development

Based on research patterns, I created user personas representing key audience segments, including beginners, experienced practitioners, and tech-savvy planners.

Each persona captured:

- Goals and motivations
- Pain points with the existing website

- Behavioral traits affecting booking and decision-making

Personas ensured that design decisions remained user-centered and aligned with real needs throughout the redesign process.

WEEK 8 Usability Test Planning

I developed a usability testing plan to validate whether users could successfully complete critical tasks such as finding a beginner-friendly class, comparing pricing options, and locating instructor or contact information.

Clear test objectives

Defined what success looks like for each task

Realistic user tasks

Scenarios based on actual user goals

Success metrics

Task completion and time on task

WEEK 9 Usability Testing & Observation

I conducted moderated usability testing sessions and observed participants as they attempted to complete key tasks on the existing website. Users consistently struggled with booking, navigation, and pricing clarity.

Testing confirmed that:

- The lack of online booking was a blocker for all participants
- Navigation inconsistencies made comparison between class types difficult
- Users felt unsure about what to pay or what was expected in the donation model

These findings validated earlier research and highlighted areas requiring immediate redesign.

WEEK 10

Ideation & UX Solution Design

Using insights from testing, I began designing solutions to address the most critical usability issues. I focused on:

Clear booking flow

Step-by-step online booking experience

Simplified navigation

Improved information architecture

Clearer pricing

Structured donation options

UX principles such as consistency, recognition over recall, and visibility of system status guided all design decisions.

I designed a high-fidelity prototype in Figma that translated research insights into a realistic, testable interface.

The prototype included:

- A prominent "Book a Class" call-to-action
- A visual class scheduling and booking flow
- Clear pricing and donation selections
- Consistent layouts across class formats
- Accessibility improvements such as improved contrast and readable text sizes

In the final week, I evaluated the redesigned experience against the original research goals. The proposed solution significantly reduced friction in booking, improved navigation clarity, and aligned user expectations with the studio's mission.

Through this project, I strengthened my skills in:

- Research synthesis and usability evaluation
- Translating insights into actionable design decisions
- Designing for accessibility, clarity, and trust

This 12-week process reinforced the importance of research-driven design and demonstrated how usability improvements can directly support both user needs and business goals.

KEY INSIGHT

Students are 3x more likely to book a class if the schedule is accessible within one click.

➤ SOLUTION

The Final Design

We designed a mobile-first experience with a streamlined booking flow that takes just 2 clicks from homepage to confirmation. The new visual identity uses warm, earthy tones and soft imagery that reflects the studio's peaceful atmosphere.

Key Features

- ✓ One-tap class booking from any page
- ✓ Real-time class availability and waitlist
- ✓ Community feed for member connections

We also introduced a community feed where members can share their practice journey, studio updates, and connect with fellow yogis.

- ✓ Personalized class recommendations
- ✓ Instructor profiles with teaching styles

Impact & Results

4.8/5

User satisfaction

Post-launch surveys showed an average rating of 4.8/5 for the new booking experience.

Lessons Learned

This project reinforced the importance of **mobile-first design** for service-based businesses. The data showed that most users make booking decisions spontaneously, often on the go.

Additionally, we learned that **visual identity consistency** between physical and digital experiences is crucial for building trust. When the website finally matched the studio's warm, welcoming atmosphere, conversion rates improved dramatically.

The community features, while initially a "nice to have," became one of the most-used aspects of the platform, driving both engagement and retention.
