

Zylker — Form Builder

A 2-Day UI/UX Design Challenge

2023

Project Overview

This project was a 2-day design challenge focused on reimagining an enterprise form builder experience. Within a limited timeframe, the goal was to design a clear, scalable, and intuitive

interface that supports both quick form creation and advanced configurations.

The challenge emphasized speed, clarity, and practical decision-making, simulating real-world constraints.

Challenge Brief

Redesign the form-building
experience for better usability

Improve clarity and efficiency
within a complex enterprise tool

Deliver high-fidelity screens
and an interactive prototype in
2 days

Constraints

- Limited time for in-depth user research
- No access to real user data or usability testing
- Focus on core workflows over edge cases

My Role

Solo UI/UX Designer

- Rapid problem analysis
- Information architecture
- Interaction & UI design
- High-fidelity screens & prototype

Approach (2-Day Breakdown)

Day 1 – Understand & Structure

- Analyzed the existing form builder flow
- Identified key pain points and usability gaps
- Defined primary user goals and core workflows
- Sketched layout ideas and reworked information hierarchy

Day 2 – Design & Prototype

- Designed high-fidelity UI screens
- Established a lightweight style guide
- Focused on consistency and scalability
- Created an interactive prototype to demonstrate flows

Design Decisions

🔗 Simplified Information Architecture

- Grouped related actions and properties
- Reduced visual clutter using progressive disclosure
- Prioritized frequently used actions

📐 Clear Builder Layout

- Separated canvas, controls, and properties
- Maintained context while editing form elements
- Enabled faster scanning and interaction

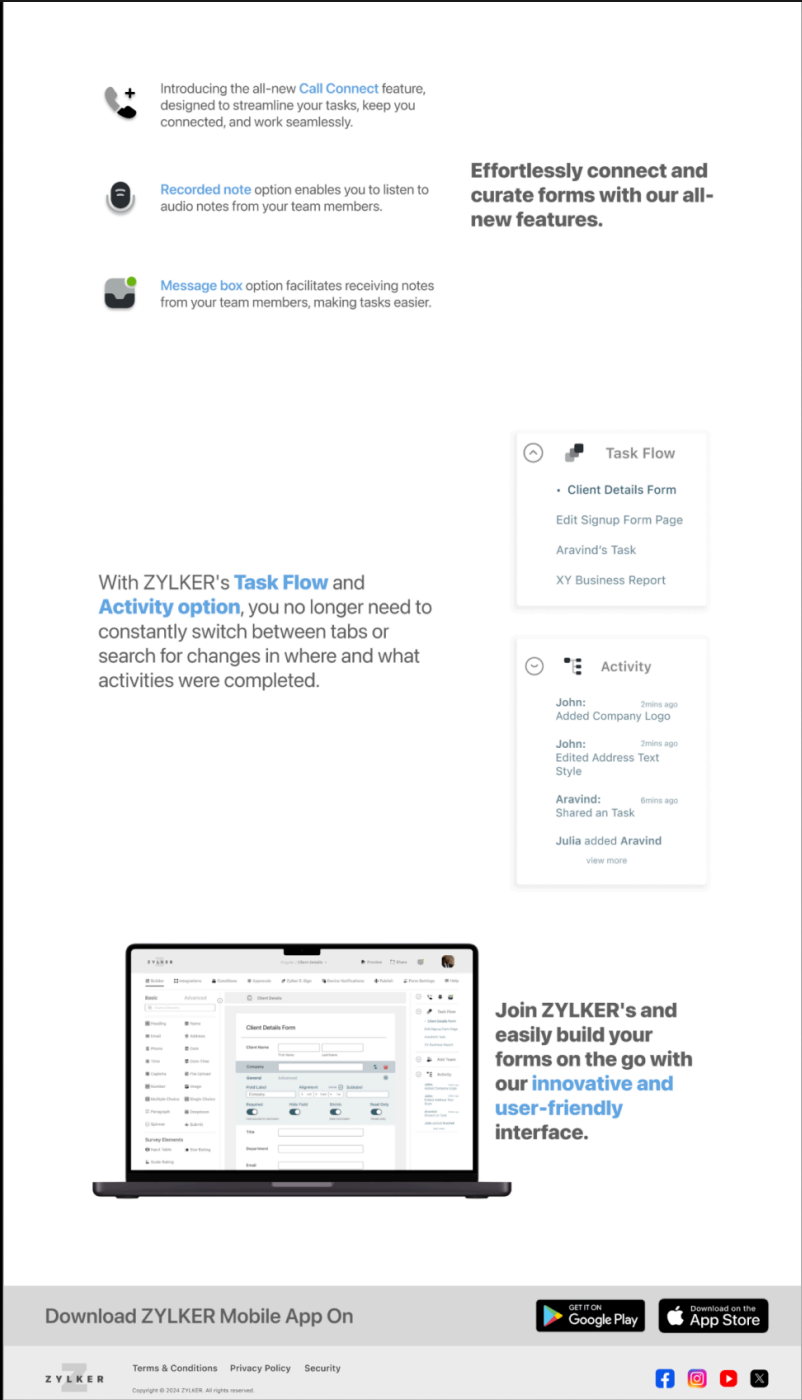

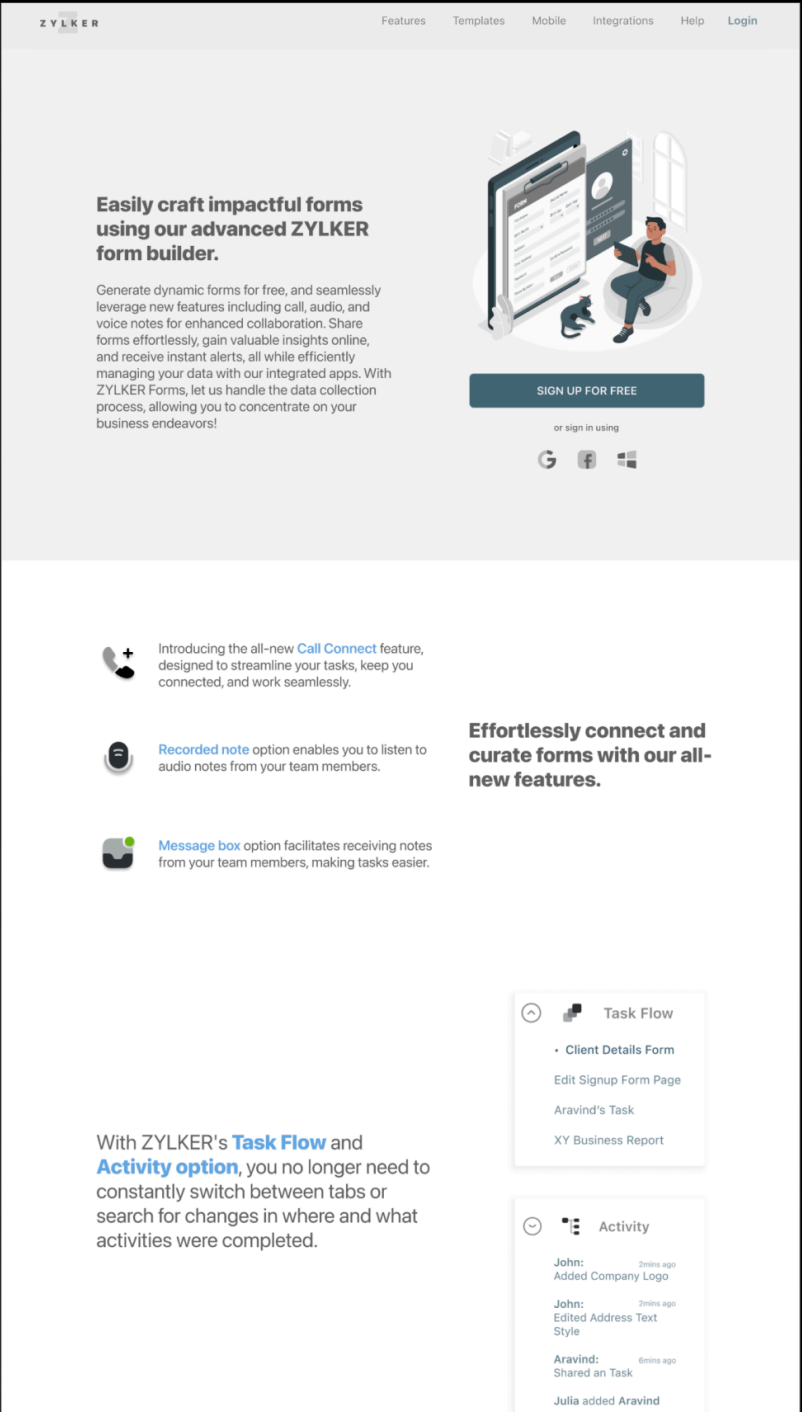

↗ Scalable Visual System

- Neutral color palette for enterprise clarity
- System font (SF Pro) for readability and speed
- Modular components to support future expansion

Key Screens

Landing Page

Introduces the form builder with a clear overview and directs users toward primary actions.

Home Dashboard

Displays all forms in a structured layout, enabling quick access, creation, and management.

Responsive Preview

Enables users to preview forms across devices, ensuring consistency and usability.

Outcome

Within 2 days, the challenge resulted in:

- A complete end-to-end form builder flow
- High-fidelity screens covering core use cases
- A scalable visual and interaction system
- An interactive prototype demonstrating key workflows

Key Learnings

- Prioritization is critical under time constraints
- Clear structure can simplify complex tools quickly
- Designing for scalability early saves future rework
